

Jorgs Hospital

Management System

Product overview | September 2026

Explore connected hospital workflows

Patient registration

Record patient details and link their hospital records.

Consultations

Capture complaints, assessments and care plans.

Admissions

Record bed allocation and admission status.

Laboratory

Track test requests and entered results.

Pharmacy stock

Record medicine batches, stock and expiry dates.

Billing

Prepare invoices with self-pay, private insurance or SHA as payer. SHA invoices remain local records; claims are not submitted.

Choose an agreed licence

Monthly subscription, annual subscription or one-time software licence. Request a quote. Hosting, onboarding, support, upgrades and staff allowance must be specified in your agreement; they are not automatically included in a one-time licence.

From demonstration to acceptance

Demonstration: Review the available workflows using fictional records.

Requirements review: Confirm departments, staff numbers, devices and existing records.

Quotation: Agree software scope, hosting, support and commercial terms.

Setup and training: Configure the agreed environment and train staff after readiness checks.

Acceptance: Validate workflows, permissions and recovery before authorising clinical use.

Current readiness

Evaluation release: use fictional data only. DHA certification, live SHA/HIE connectivity and production security acceptance remain pending. Local audit and encrypted-recovery tests do not establish live hosting readiness.
